

Amendment to the Claims:

The listing of claims will replace all prior versions, and listings of claims in the application:

Listing of Claims:

1. (Original) An electronic calendar system comprising:
- a plurality of wireless devices;
- an access point in wireless communication with said wireless devices;
- a server connected to said access point;
- said wireless devices being connected to said server through said access point in order to obtain calendar data calendar service therefrom, each of said plurality of wireless devices having equal access to said calendar data.
2. (Original) The system according to claim 1, wherein the network is the Internet.
3. (Original) The method according to claim 2, wherein at least one said plurality of wireless devices is connected to said server through a second access point, a second service provider and the Internet.

4. (Currently Amended) The system according to claim 1, further comprising a global address server connected to said access point through which said wireless devices can obtain an address of said server.

5. (Original) The system according to claim 4, further comprising the calendar service and data is fetched from the server.

6. (Currently Amended) The system according to claim 5, further comprising the calendar service and data, that is fetched from the server is available to any terminal, that is authenticated to be member of the group.

7. (Currently Amended) The system according to claim 5, further comprising the calendar service and data, that is fetched from the server is available to any terminal, that is authenticated by the user of the terminal to be member of the group.

8. (Original) The system according to claim 1, wherein said calendar data is displayed on said wireless devices having dates listed in linear fashion.

9. (Original) The system according to claim 8, wherein calendar entries are of different colors.

10. (Currently Amended) The system according to claim 8, wherein said display is changed to introduce a new entry to the calendar data which is typed on a keyboard.

11. (Original) The system according to claim 1, wherein said calendar data is originated partly from another application of the server.

12. (Original) A wireless family calendar comprising:

a server containing calendar data, said data including a plurality of calendar entries;

a plurality of wireless devices, forming a family;

said wireless devices being wirelessly connected to said server so as to provide each of said plurality of wireless devices with equal access to said calendar data and to allow each of said plurality of wireless devices the ability to add new data thereto.

13. (Original) The calendar according to claim 12, wherein each of said wireless devices has access to individual calendar data which is not accessible by other of said plurality of wireless devices.

14. (Currently Amended) The calendar according to claim 12, wherein said server also contains personal data and wherein each of said plurality of wireless devices has equal access to said personal data.

15. (Currently Amended) The calendar according to claim 14, wherein said personal data can be accessed by said server in forming calendar data or other data.

16. (Currently Amended) The calendar according to claim 12, wherein calendar data is displayed on said wireless devices with days within a month being displayed in a linear fashion and with different views available for weekly and daily calendars.

17. (Currently Amended) A method of accessing a family calendar comprising:

providing a server containing calendar data;

wirelessly connecting a plurality of wireless devices to said server;

equally accessing said calendar data from said wireless devices;

displaying said calendar data on said wireless devices as a calendar listing on a screen.

18. (Original) The method according to claim 17, wherein said wireless devices are connected to said server through an access point.

19. (Original) The method according to claim 18, wherein said access point is connected to said server through a service provider connected to the Internet.

20. (Original) The method according to claim 18, wherein said wireless devices contain the address of a global address server and said wireless devices access the global address server to obtain the address of the server in order to connect thereto.

21. (Currently Amended) A wireless family data center comprising:

a server containing notice board data and calendar data;

a plurality of wireless devices, forming a family;

said wireless devices being wirelessly connected to said server so as to provide each of said plurality of wireless devices with equal access to said bulletin board data and calendar data and to allow each of said plurality of wireless devices the ability to add new data thereto.

22. (Currently Amended) The method according to claim 21, wherein said server further contains personal data and wherein each of said plurality of wireless devices has equal access to said personal data.

23. (Currently Amended) A system according to claim 1 for providing calendar service and communication service in a computer network , comprising:

a terminal with an identifier,

a gateway from the terminal to the communication services,

an access point connected to the gateway through which the terminal ~~accesses to~~ accesses the communication service, and

a server connected to the gateway, the server having information of the valid identifiers of the terminals enabling service, and a configuration tool in the

A1
server for managing at least some of configurable controlling functions of a browser
from the terminal.

24. (New) The system of claim 1 wherein:

the calendar data is retrieved from the server.

25. (New) A wireless family calendar in accordance with claim 12 wherein:

the calendar data is family data of users of the plurality of wireless
devices and is retrieved from the server.

26. (New) The method of claim 17 wherein:

the calendar data is family data of users of the plurality of wireless
devices and is retrieved from the server.

27. (New) The wireless family data center of claim 21 wherein:

the notice board data and calendar data are retrieved from the server and
the family data is data of users of the plurality of wireless devices.
